

FUEL SYSTEM SECURITY

At Kelch, meeting the demands of an ever-changing marketplace is what sets us apart from the competition. It's the engine that drives our business.

Our new Locking 350 fuel cap is an example of how we work with customers to develop products that meet a specific need in the market.

As fuel costs began to skyrocket, OEMs turned to Kelch for a way to secure fuel systems from theft and other tampering. Our new Locking 350 was the answer. This 3.5" diameter, all-plastic cap features a tamper resistant locking feature for optimum security. It is designed for use on plastic fuel tanks and reservoirs and comes in both vented and non-vented versions. Other cap sizes are currently in development.

[Learn more about](#) the Locking 350 today.
